

1 Study Coach - plan view redesign

Design notes and assumptions

Organized around "what do I study next": the hero is the next session with the single solid blue button. Plan management (Push to Schedule, Refine inputs, Export in overflow) lives in the header row; Push is outlined so the hero Start stays the one primary. Pushed state shown in 3a as a green-dot confirmation with a quiet Update link. The progress bar reuses the Grade Hub cushion-bar language: blue done, light blue remaining, amber for sessions behind schedule in 3a. In the behind state, Catch up is an amber-bordered action inside the amber block; Start session remains the page primary since the student still starts the next session either way. Topics strip sits above the weeks with amber markers on struggle-added topics and carries the Struggle Tracker link, so the tracker no longer occupies a card row. Numbers: 12 sessions x 45 min = 9.0 hrs; mid-plan 5 done leaves 5.25 hrs; behind state 4 done, 7 expected by day 9 of 18, so 3 behind, 6.0 hrs left. Nav chrome shown on 3a and 3a only. Trust line cut entirely per brief.

3a Fresh plan - nothing done - not pushed - desktop 1280

Week 1 · Foundations4 sessions · 3.0 hrs

1Cell structure and organelles

Name every organelle and what it does without notes.

Active recall · 45 minUP NEXT

2Membrane transport

Passive vs active transport, and when the cell uses each.

Practice questions · 45 min

3Enzymes and activation energy

Explain how enzymes lower activation energy in your own words.

Feynman technique · 45 min

4Week 1 review: foundations

Retest everything from sessions 1 to 3, closed book.

Spaced review · 45 min

Week 2 · Energy and metabolism4 sessions · 3.0 hrs · glycolysis, Krebs cycle, photosynthesis

Week 3 · Communication and division4 sessions · 3.0 hrs · signalling, mitosis, meiosis, mock exam

3b Mid-plan - 5 of 12 done - pushed to calendar
